Effective in luring mosquitoes with Ultra Violet light and CO2

VECTORTRAP™ ADVANCED FLYING INSECT TRAP

Flying Insects can be a real nuisance and their bites can cause irritation of the skin including itching, redness and swelling. Mosquitoes for example are vector carriers for many diseases affecting humans such as Malaria and Dengue.

Effective up to 210m², the Vectortrap™ T30 can help control the population of mosquitoes and other small flying insects such as fruit flies, moths and midges, in areas with a large amount of flying insects such as cattle sheds, chicken farms, large greenhouses, golf courses, parks, orchards, farm crops, outdoor restaurants and factories.

HOW DOES IT WORK?

The Vectortrap™ T30 trap works by luring the flying insects to the trap via a powerful UV light. Once the insects are in catching distance, an electric fan sucks the insects into a non return mesh net.

SPECIFICATIONS

Model	T30
Size	Ø30x45cm
BL lamps	20Wx2 (Quartz)
Electricity	220V, 60HZ
Effective Area	210m ²
Consumption	60W
Material	Steel (Powder coating)

FEATURES

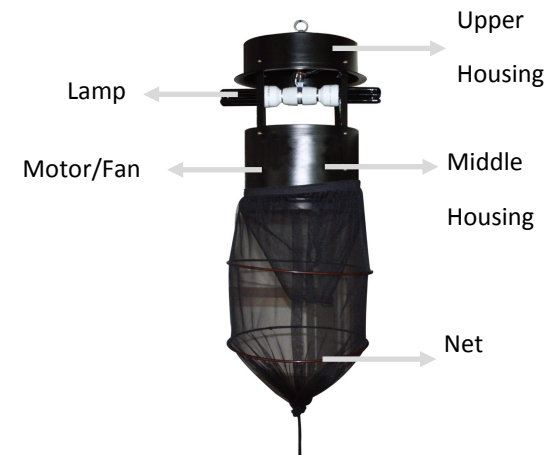

1. Designed for Outdoor use
2. Powerful Ultra Violet Lure
3. Powerful Low Noise Fan Motor
4. Easy to set up

CAUTION

1. Keep out of reach of children
2. Disconnect power before cleaning or servicing the trap.
3. Do not hang trap from the power cord.
4. Do not immerse the trap in water.
5. Do not operate the trap with a damaged power cord or plug.
6. Plug the trap correct voltage supply
7. Read and follow the instructions in this manual before operating the Trap.

WHERE TO PLACE THE TRAP

1. The Vectortrap T30 can be used for indoor or outdoor applications.
2. Place the trap in a shaded area protected from strong wind.
3. Hang the trap by the ring situated on top of the trap 1.5 ~ 2m from the ground,

FITTING INSTRUCTIONS

1. Remove the trap from the carton box.
2. Place net over the rim on the middle housing and tighten Velcro to secure.
3. Once hanged, plug the trap to the mains.
